GIFTS AT WORK

John Tyler Foundation

2014 Annual Report
January – December, 2014
Dear Friends,

In February 2014, John Tyler Community College released the findings of an economic impact study conducted by Economic Modeling Specialists International. The study found that the College is indeed a major economic engine for Virginia and, particularly, for the College’s service region of Amelia, Charles City, Chesterfield, Colonial Heights, Dinwiddie, Hopewell, Petersburg, Prince George, Surry and Sussex.

When you consider that the College added $226.2 million to the JTCC service area economy in 2012-2013 and that 75 percent of Tyler students stay in the JTCC service area after leaving the College, the downstream benefits of each gift, grant and volunteer hour become very evident.

The economic impact study confirmed what we as supporters of the College have long known: the work of the John Tyler Community College Foundation directly supports not only the College and its students, faculty and staff, but also quality of life in our communities.

In 2014, the College and Foundation focused on:

• Partnerships that Train Students for Today’s Workforce
  The College partnered with local school districts, foundations and businesses to offer high school students the opportunity to complete career studies certificates in Basic Precision Machining Technology during their junior and senior years of high school. What do these students have in common? Turn to page 4.

• STEM-H Programs
  Although 31 percent of John Tyler’s 2014 graduates majored in a science, technology, engineering, mathematics or health care (STEM-H) program, the number of people preparing for the increasing STEM-H job demand is not adequate. Learn how the College is working to prepare future STEM-H leaders on page 8.

• Increasing Net Assets and Student Scholarships Awarded
  In 2014, thanks to your support, the Foundation’s net assets surpassed the $7,000,000 mark, and a record 168 students benefitted from $273,000 in student scholarship awards. Read more about how scholarships have made a difference for students on page 12.

On behalf of the John Tyler Community College Foundation Board, thank you for investment in this important work in 2014, and I look forward to your continued support in 2015.

Sincerely,

Michael R. White
President and CEO, Virginia Asset Management, LLC
President, John Tyler Community College Foundation
GEARING UP THE NEXT GENERATION

High-Tech Manufacturing Training Hits High Schools

In May 2014, seven Amelia County High School students crossed the stage as part of Tyler’s Class of 2014. The students were the first cohort of high school students to graduate from the College’s Basic Precision Machining Technology career studies certificate program. They graduated from Tyler about a month before they celebrated their high school graduations.

During the fall and spring semesters of their junior and senior years of high school, the students spent two hours a day, four days a week at Tyler’s Chester Campus, gaining the skills needed to be competitive in the in-demand field of advanced manufacturing.

They underwent rigorous hands-on training, honing their abilities in manual and automated machining and developing skills that meet nationally recognized industry standards and are highly marketable in the workforce. All seven students earned at least one National Institute for Metalworking Skills (NIMS) certification; some students earned three.

With additional community support, the program expanded to include welding and students from other areas in 2014.

“Getting these skills and earning industry credentials while in high school puts these students way ahead....It makes them marketable.”

- Melinda Miller

Interim Associate Dean
Division of Engineering, Business and Public Services
John Tyler Community College

GIFTS AT WORK

High School Precision Machining Program

The Tobacco Region Revitalization Commission provided a generous grant to support students from Amelia, Dinwiddie and Sussex high schools who are concurrently enrolled in the two-year precision machining program. In addition to tuition assistance, the high school students in the precision machining program receive textbook assistance thanks to partnerships with the local business community.
The first group to graduate from the College’s high school precision machining program proved to be very successful after graduation.

Two students – Seth Roberts and Will Morgan – earned internships at Rolls-Royce while in the program, and Morgan took a full-time job with the company after graduation. Ricky White secured a job at Coesia that began immediately after his high school graduation in June.

Other students elected to continue their education or training. William Clements intends to use his skills in the military, and Andrew Collins plans to apply the critical thinking and other skills he learned in the program to a degree in computer science engineering and minor in business management – credentials he hopes to use in a career with an advanced manufacturing company like Rolls-Royce in the future.

Hear more from the Amelia students at [http://youtu.be/Bb5_lvtGAmg](http://youtu.be/Bb5_lvtGAmg).

Math is a major barrier for students entering college-level STEM-H degree programs. A grant from Altria Group supports Tyler’s rollout of a college-readiness initiative for high school students. The initiative includes:

- testing high school juniors for college math readiness;
- supplementing high school curricula with a course for seniors who need additional preparation for college mathematics;
- offering college coursework for high school students who test into college-level math; and
- providing a Summer Bridge Program for recent high school graduates who need to quickly prepare for college-level math.

Grant funds will also support STEM-H summer camps held at John Tyler for 4th – 8th graders. To organize and direct all of these efforts, Tyler hired a new STEM-H coordinator.

Learn more about the College’s STEM-H academic offerings at www.jtcc.edu/stem.

“The Altria grant will help us raise awareness, build enthusiasm, get students college-ready, and encourage more people to enter an educational pipeline that will lead to careers in STEM-H.”

- Dr. Edward “Ted” Raspiller
  President, John Tyler Community College
Student Spotlight:
Alex Ritchie

Alexandria “Alex” Ritchie has a plan. She wants to earn an associate degree in engineering at John Tyler, transfer to Virginia Commonwealth University to study biomedical engineering, and then apply to medical school so she can become a pediatric physician.

Her plan is very personal. When she was 13, Ritchie’s parents told her about a sibling she had never known – one who had suffered from a chromosome deficiency. The story ignited a spark in Ritchie, and driven by the desire to help others, she put together a strategy for her education.

At first, a two-year degree from John Tyler was not the plan, but a change in finances prompted her to enroll in the College’s engineering program. “It ended up being a good thing,” Ritchie said.

While at Tyler, Ritchie became one of only 40 community and junior college students from across the nation selected to travel to NASA’s Marshall Space Flight Center as part of the National Community College Aerospace Scholars (NCAS) project.

While at the center, she learned more about careers in science and engineering. “It wasn’t related to medicine,” Ritchie said. “But, it allowed me to see engineering in action and to meet people and find out how they used their engineering degrees. It also taught me how to think like an engineer – how to problem-solve and approach situations from different angles.”

“I like how invested the faculty and staff are in the students here, and there are internship and scholarship opportunities.”
- Alex Ritchie

Photo: Ritchie with faculty member Sean Castleberry and Dr. Edward “Ted” Raspiller, president of John Tyler, at the Rotaract Club’s charter ceremony.
Donors Provide Life-Changing Support Through Scholarships

2014 was a record scholarship year for the Foundation. 168 students benefitted from $273,000 in scholarship awards. Many students describe the support as “transformative” and “life-changing.”

The Foundation thanks all who have established and contributed to scholarships that open new doors for students.

Gloria Horne sees good in even the darkest moments.

“When I was 37 years old, my 57-year-old mother passed away from ovarian cancer in my bedroom. I was so impressed with the care that home hospice delivered, especially the nurses. I decided then that I would like to be able to give a family the care that the hospice nurses gave my mom and the rest of my family,” says Horne. “It may be the doctors who get the credit for saving patients, but in reality, it’s the nurses who treat, nurture and care for the families.”

Becoming a nurse wasn’t a dream that Horne would achieve right away. For twenty years, she cared for her family. She became a grandmother and built a career in retail, until, one day, a management training program for work brought her to John Tyler Community College’s Chester Campus. “I was impressed by the campus,” says Horne. “I appreciated the small student base and ability to connect with professors.” Going back to school to become a nurse suddenly seemed possible.

Now, Horne is thriving as a college student, thanks in part to the support of a Patient First Allied Health Programs Scholarship through the John Tyler Community College Foundation.

“I am 57 years old now, and this is my chance to make my dreams a reality.”

- Gloria Horne
Je’Mira Johnson has a mind for math, and as she prepared for college, she knew that the rising cost of higher education combined with being one of eight children would not leave many financial resources for college.

“I chose John Tyler, because I wanted to save as much money as possible while also receiving a great quality education and contemplating my next academic move,” says Johnson. At Tyler, Johnson is studying business administration with an eye toward eventually earning her doctorate, working in investment banking and one day becoming CEO of her own business.

“Receiving my associate degree is only a stepping stone to the beginning of my career, and I just need a little help to get where I want to be in life,” says Johnson, who earned the Amsted Rail Co., Inc. Endowed Scholarship from the John Tyler Community College Foundation.

She’s especially grateful for the experience of learning from dedicated, passionate faculty members at Tyler. “When someone who teaches you loves what they do, I find it much easier to learn from them,” says Johnson. One of those faculty members helped Johnson land an internship with the Chesterfield Chamber of Commerce, where she’s gained valuable hands-on experience.

Johnson is also the president of the College’s Phi Theta Kappa Tau Rho Chapter and has partnered the group with the College’s Rotaract Club on a number of community service projects. All of these experiences are helping Johnson prepare for her next planned step: George Mason University.

“With my scholarship, I’m able to do what I need to do: pay for my tuition, fees and books; graduate; and continue working on my next degree.” - Je’Mira Johnson
The period of transition from high school to college is a critical time for all young people – but especially so for foster youth. Imagine trying to work through seemingly immense changes without a parent or family member to guide you. It’s a situation Asein Ta knows well, but thankfully, he found the help he needed.

Ta was born in a rural area of Myanmar (Burma), and after losing his parents, he moved to Thailand, where he lived in refugee camps for more than four years. When the opportunity arose to move to another country, Ta asked to be taken to the United States. In 2008, he came to Virginia and entered the foster care system. Ta enrolled in James River High School’s ESL program. He lived with a family that only spoke English and focused on learning English as quickly as possible.

When Ta graduated from high school in 2012, his social worker told him about JTCC’s Great Expectations program, which offers support and guidance to foster youth who want to get a college education. Through the program, a coach works with students to navigate college financial and living arrangements, and peer mentors provide support and guidance. This individual help and attention makes a big difference in how foster youth are able to navigate the transition to college and succeed academically.

“It did not take me long to choose which college I wanted to attend,” said Ta. “Not only did Tyler have Great Expectations, it was close to home, had smaller classes, and offered a class schedule that would allow me to still work while pursuing his General Studies degree with a specialization in elementary teacher education.”

“Every little bit of financial support makes a huge difference to me,” said Ta. “Since I turned 21, I have been on my own. I do not have any family to support me, and previous foster care support has ended. I work 30 hours a week to pay my personal expenses, and rely on financial aid to help me with my college tuition.”

Ta also applied for and received the Chesterfield County Scholarship, which allowed him to work fewer hours and focus on his coursework. For Ta, Great Expectations and his scholarship also made possible something many of us take for granted: encouragement, support and a little extra cushion to buy healthy food and prepare for unexpected expenses.
FUTURE FUNDING FOCUSES

Thanks to support from our community, the JTCC Foundation has been able to provide valuable resources to advance the College’s mission. We will continue to build on that commitment as we seek additional resources for three exciting new initiatives.

1. **Tyler Early College Academy Pilot Program in Hopewell and Petersburg**

In fall 2015, the College will begin offering the Tyler Early College Academy, an academic program designed for students who are at risk of not completing high school or pursuing additional education or job training. Students can earn a General Studies Associate of Science Degree (61 credits) or a General Education Certificate (32 credits) at free or reduced tuition while they are in high school.

The program begins with a summer orientation for rising 9th grade students, followed by dual enrollment classes held at the high school in 9th and 10th grade. In 11th and 12th grade, students will be transported to John Tyler to complete the remainder of their college coursework on campus.

Across the nation, studies have shown that students participating in similar programs are far more likely to graduate from high school and continue to college. The College plans to expand the program to additional school divisions in the future.

2. **Creating a Student Success and Cultural Arts Hub at Midlothian**

Slated to open in early 2016, a new 70,000-square-foot academic building at John Tyler Community College’s Midlothian Campus will offer a number of exciting opportunities for Tyler students and the community at large.

The three-story academic building is designed for next-generation collaboration and learning – not only in the fields of STEM-H – but also the arts. A black box theatre, music rooms and dance/fitness classrooms will offer students and community members spaces to explore and develop their creative talents.

A small café, patio and outdoor classroom/meeting space, in addition to a new Student Success Center, will enrich the campus experience for students and open up a number of possibilities for community performances and events.

3. **Expansion of Health Science Program Offerings**

Building on the success of our well-respected Nursing Program and our cutting-edge Emergency Medical Services offerings, the College is considering offering additional academic programs in health science fields to meet local workforce needs.

College leaders are working with local health care agencies to assess needs, as well as survey the community and current students about interest in new programs.
**FINANCIALS**

**Net Assets**
- 2014: $7,211,820
- 2013: $6,598,888
- 2012: $5,982,069

JOHN TYLER COMMUNITY COLLEGE FOUNDATION

OUR MISSION:

The John Tyler Community College Foundation acquires vital resources which advance the College’s mission to provide superior, affordable and accessible education. The Foundation seeks the time, talent, and financial support of alumni, individuals, businesses, civic groups, and elected officials in order to build relationships which ultimately help the College elevate the community’s quality of life.
